Smart and Simple Ways to Kill Fruit Flies

- One of the simplest ways to kill fruit flies is to set out a dish of apple cider vinegar with a couple of drops of dish soap in it. The dish soap eliminates the surface of the vinegar, and the flies slip in and drown.
- If you are still having difficulties with the fruit flies, you can attract more by putting a small piece of old fruit in the dish as well.
- For fruit flies that are in your drains, pour bleach down the drain.

These three remedies have been tried with great success by some our residents.
